Characteristics
Mercenary
Get it done
Focused
Customer oriented

Sandeep has traversed a long journey of success in a short time span. Boarding the team as a Software Engineer, with initial responsibility of CreditDimensions, Clarification and Beneficiary, his phenomenal performance led to fast growth. The rise to the position of Associate Partner within a short span of two years was direct fallout of his deep knowledge and execution skills in projects.

Sandeep leveraged his experience in retail and engineering to continue to grow his knowledge of design and delivery of enterprise IT solutions for Financial technology and Data management.

Coupled with an engineering background and diverse personality, he gained a quick insight into cross industry business processes and solution methodologies. He brings to the table a unique mix of business and technology expertise and a hands down approach to problem solving –vital to designing solutions for complicated and demanding environments typical to the Financial industry.

An expert at harnessing technology to deliver innovative solutions for business problems, Sandeep grew further to become the Director of Infrastructure and Partner at ebusinessware's growing practice in USA.

However, Sandeep's biggest success was yet to come. The year 2005 witnessed the achieving of this too when he got married to his long time associate.

He, like every other ebusinessware genre is unstoppable and has mastered Credit Derivatives knowledge to become the Director of Credit Derivatives technology. Sandeep manages a multi-million dollar portfolio of state of the art projects with an army of onsite and offshore teams supporting him.
