A solution is only as good as its foundation – get IT done right with ebw Business Traceability Analysts

- Business Requirements Analysis is at the core of Software Development. It is a foundation class for ebusinessware Institute of Applied Software Engineering (EIASE).
- We quickly translate business requirements into industry-standard documents that are readily usable by designers, developers and testers to ensure delivery of high quality software solutions.
- As software development experts, we know the appropriate level of detail and description that is needed to support development of technical design specification.
- Clients benefit because we write
 - ▶ Robust and Complete Business Requirements
 - ▶ Unbreakable and Traceable Functional Requirements
 - ▶ Unambiguous and Detailed Technical Specifications
- We will create remarkable success for your projects - try us once and you will see why we have 100% repeat customer success.
- ebusinessware has a proven track record of delivering Requirements gathering, Business analysis, and Specification writing to the world's largest financial institution and niche financial products and services provider.
- Our clients continue to leverage our services because our delivery is world-class, our processes are excellent and our business domain experience is superior.

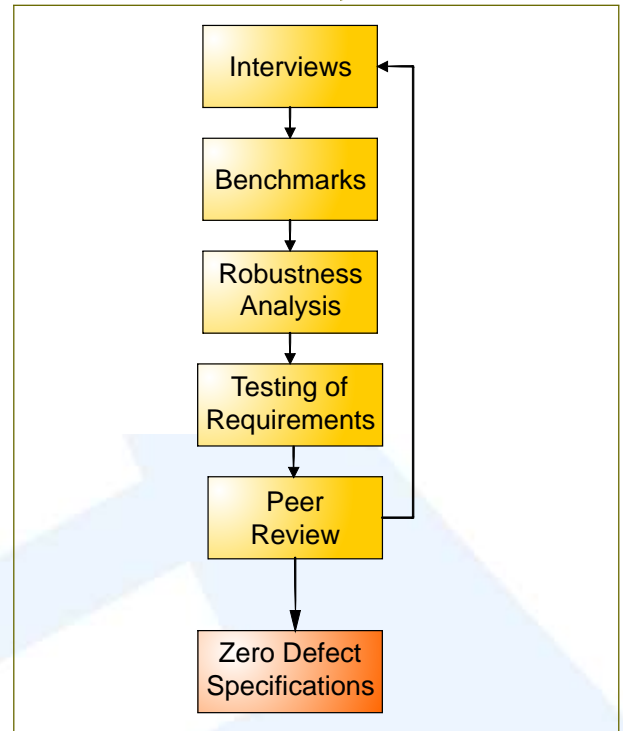

Our analysts know your industry, making it easier to collaborate on the requirement drafting.

We Deliver Unbreakable Requirements

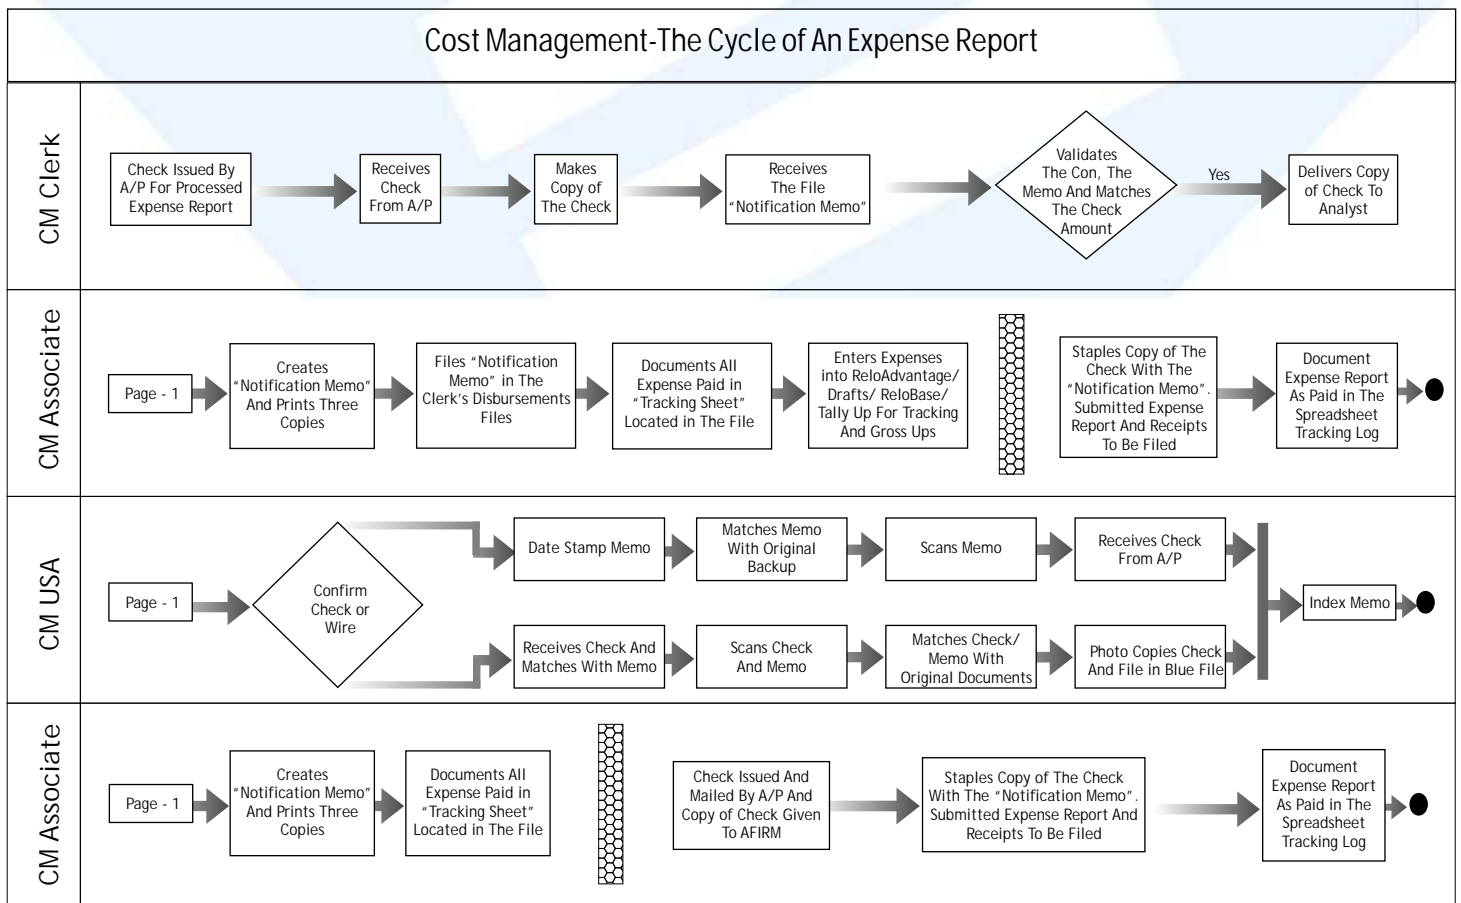

- Traceability among Business Requirements, Functional Specs, and Technical Specs is the key factor in predicting the shape and success probability of the future system to be created.
- Requirements, if not properly conceived, described, or reviewed can balloon into a scope change nightmare. Avoid project cancellations and cost overruns by:
 - ▶ Leveraging our unparalleled team of business analysts who will hit the ground running.
 - ▶ Using ebw's UniRAD process to get started on the right foot and to stay in control.
- We have a bullet-proof process (UniRAD) which encourages analysts to probe the details such that the description of the system is robust.

WITH UniRAD, YOU GET:

Business analysis is one of our core competencies...

We passionately combine UniRAD's Robustness Analysis with our track record and experience to create superior deliverables for our clients.

"We help our clients to save money, enhance quality and lower the risk of IT projects."

OUR VALUE PROPOSITION

Our combination of in-depth industry expertise coupled with an ability to rapidly scale on and off-shore development, analyst and business processing teams on short notice helps our clients to get their projects done on time and within budget. Our technical professionals are experienced in a broad range of technologies ranging from legacy systems to cutting edge technology, enabling us to succeed in a wide variety of challenging assignments. Our business processing professionals are experienced in specific areas of data management and transaction processing, reducing learning curves and increasing productivity.

IMPLEMENTATION METHODOLOGY

ebusinessware technology architects have developed the **UniRAD** methodology framework for undertaking even the most complex collaborative project development assignments. **UniRAD** formalizes a quality management system practiced at the organizational level, such that progression of those best practices to all projects is natural, automatic and smooth for its workforce. **UniRAD** derives the best process components from the popular Rational Unified Process project methodology and the Rapid Application Development approach, providing a structured and delivery focused project approach.
