ERP/CRM Solutions

Are you paying too much for software licenses?

Have you dreamt of a multi-currency, multi-entity state-of-the-art accounting system for your business?

Have you felt the need for Sales CRM system to meet your specific requirements instead of having to use standard Salesforce reports, that too for a monthly fee?

Have you been pressed for ERP systems' functionality to meet your business requirements but turned off due to exorbitant price tag?

TUTOS

(www.tutos.org): Stands for The Ultimate Team Organizer Software. It has been extended by us for use by sales teams for their end to end lead generation, marketing campaigns, and post sales needs. An integrated tool that connects products, time & opportunity tracking and calendar management extended by extensive reporting.

COMPIERE

(www.compiere.org): An alternative but strong and comprehensive and time tested ERP / CRM system with installations all over. It is a fully integrated ERP, CRM, Supply chain management and multi-currency, multi-entity accounting system.

Corporate IT Infrastructure Solutions

Are you paying too much for software licenses?

Did you ever want a secure and truly private network for your office and still have remote access to the network?

Did you ever want your corporate email server to provide a web interface so that you can check mail from airport terminals, PDA / cell phones, home PCs?

Do you want a professional looking website for your business and have full control on changing the content without having to wait for developers?

Do you get nightmares of hard disks crashing and losing vital business information?

ebusinessware engineers continue to invest in open source tools to enrich your corporate infrastructure and can help you realize your IT infrastructure dreams at the fraction of the costs. You no longer need to have an IT budget like a Fortune 100 company and still have state of the art business continuity planning - disaster recovery, backup and archiving strategy

" We help our clients to save money, enhance quality and lower the risk of IT projects."

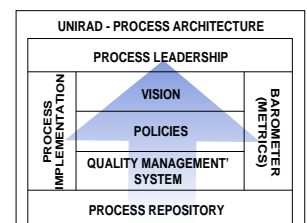

OUR VALUE PROPOSITION

Our combination of in-depth industry expertise coupled with an ability to rapidly scale on and off-shore development, analyst and business processing teams on short notice helps our clients to get their projects done on time and within budget. Our technical professionals are experienced in a broad range of technologies ranging from legacy systems to cutting edge technology, enabling us to succeed in a wide variety of challenging assignments. Our business processing professionals are experienced in specific areas of data management and transaction processing, reducing learning curves and increasing productivity.

IMPLEMENTATION METHODOLOGY

ebusinessware technology architects have developed the UniRAD methodology framework for undertaking even the most complex collaborative project development assignments. UniRAD formalizes a quality management system practiced at the organizational level, such that progression of those best practices to all projects is natural, automatic and smooth for its workforce.

UniRAD derives the best process components from the popular Rational Unified Process project methodology and the Rapid Application Development approach, providing a structured and delivery focused project approach.
